https://www.bahria.edu.pk/#research_innovation_page

Bahria University started a small environmental laboratory in 2007 in Karachi Campus to service local textile industries with their wastewater treatment solutions. Soon after its recognition from the Federal Environmental protection agency in 2008 began a journey that would see a small Lab become one of the largest, most highly respected, commercial laboratory services in Pakistan. Students at both UG and PG levels are allowed to conduct their research/project in the Lab.
